

INTERNATIONAL MANAGED BANDWIDTH

SERVICE DESCRIPTION

International Managed Bandwidth Service

NTT America's International Managed Bandwidth Services are offered at variable speed classes and consist of furnishing for the private use of Customers and Authorized Users, the requisite channel facilities for direct transmission and reception of voice, data, facsimile and video and other lawful communications between an NTT America-designated POP in the United States and the theoretical midpoint of the communications path. End-to-end International Managed Bandwidth Services may be provided in conjunction with the facilities and services of other carriers and Correspondent Carriers designated by the Customer. NTT America-furnished Telecommunications Facilities provide for simultaneous transmission of U.S.-originating and U.S.-terminating communications. The International Managed Bandwidth Services are offered by the NTT America on a constant basis using leased lines at a speed no greater than the bandwidth selected by the Customer.

The following option is also available for the International Managed Bandwidth Service:

Emergency Back-up Option (Leased Line service permitting, by Customer's prior application that is accepted by NTT America in writing, switchovers to back-up routes during times of emergency).
